Have you ever had a closer look at

**the most versatile**

vent opener in the world

**UNIVERSAL** solar vent opener for domestic greenhouses available ? This solar powered vent opener can be used for so many different purposes, that it is by far the best buy for hobby greenhouses. It has been designed for use on :

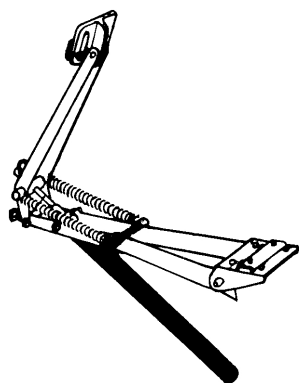

1) **LIGHTWEIGHT WINDOWS** (polycarbonate and other lightweight materials) Due to two strong pull-back springs, that both assist closing the window and holding it firmly when windy, vent-openers from Orbesen Teknik have 3 times been named Best Buy by an independent British magazine.

**DETACHABLE** Detachable within one second due to the ingenious easy-clip system. You just squeeze the arms of the openers using one hand - and the opener has been freed for full access to the cold frame or the greenhouse.

2) **COLD FRAMES** Thanks to being detachable, these universal vent openers are no less than ideal for cold frames. It lifts the lid of the frame, and you can detach it in a second, when needing to work inside the frame - it's so easy !

3) **DUTCH DOORS** The solar vent opener is ideal for creating extra ventilation by opening a Dutch door (sliding) either if you have no window, or if you want much greater air circulation.

4) **LEAN-ON GREENHOUSES** Such greenhouses usually don't have windows but sliding / Dutch doors - see above !  
However, if there is a window, it is usually a lightweight one - see above !  
Lean-on houses don't have much space - well, Univent sits parallel to the window when fitted and do not stick out into the room (like other makes on the market do).

**FOUR openers in ONE :**

no wonder we call it  
**UNIVENT**
